

Confetti Effects

Air effects are very useful for venues where pyrotechnics are not an option. With a variety of options of hanging or mounting the air effects can add that spectacular feeling to your event. Multiple options of confetti, streamers, glitter, petals etc make this a very versatile option to give your event that 'wow-factor'.

Le Maitre Electric Air Cannon

The Electric Air Cannon is designed to fire streamers, glitter or confetti up to 15 metres, at any angle, with minimum noise. It is particularly useful in venues where pyrotechnics are not an option

Multi Dropper

These are suitable for use on stage or other situations where there is overhead support. The Multi Dropper can be adapted to hold many types of effects, whether it is confetti, glitter or rose petals. The unit is controlled via DMX and by varying the speed will alter the amount of falling effect. Several units can be daisy chained together using the in and out connections for both power and DMX.

Swirl Confetti Fan

Swirl confetti Fan is designed to create a silent storm of confetti, hung from a truss or ceiling. The Swirl Fan can be easily controlled by connecting the machine to a local dimmer or a dimmer connected to a DMX controller. The Swirl Confetti Fan can be filled up with 2kgs of paper confetti or 3kgs of metallic glitter confetti. When the Swirl Fan is operating at full speed, the machine will fan out the confetti continuously for approximately 1-2 minutes. It's also possible to fill the machine with paper snow confetti to create a low noise snow effect.

We hold stocks of confetti, glitter and streamers available in stock, please contact us for prices.
