

Gobo Effects

A gobo is an etched disc which is placed in the gate of a profile spot. Gobos can be made from metal, black and white glass or coloured glass. The etched pattern will be projected. It is essential that the correct size gobo and gobo holder is selected for the type of profile spot intended. If there is any doubt please give us a call for advice.

There is a massive range of metal gobo's available – stars, trees, fire, water, windows, skylines, flags – the list is endless! Custom Gobos can be made at an extra charge – ideal for company logos or bride and grooms names.

Glass Gobo's hold more detail than metal ones. You can also have them coloured – These can be of stock designs or custom ones for a specific show or event.

Animation Discs

The animation disc is a great way to create a moving image. It consists of a moving plate rotating in front of a gobo creating the effect of flames, water rippling, clouds moving, snow falling or even branches moving in the breeze. Below are a few examples of discs available – why not give us a call to discuss how we can "Animate" your next production.
